Tools
Visual Studio Code, Eclipse, Git, GitHub

Operating System
Windows 10, 7

PROJECT

Food Kiosk - Smart Food Ordering System for Restaurants

The purpose of this project is to automate food ordering system. Menu will be available in display at customer's seating area. Customer can place order through mobile/tablet and placed order will be sent to the chef's display. After the chef has completed preparing the item, it would be notified to the customer and bill would be directly displayed on his tablet as well as managers system. This automated system increases quality and speed of service and reduces the need of the waiter.

Responsibilities

Actively participated in design and development of food kiosk.
I was involved in design and development of web interfaces using HTML,CSS and Bootstrap.
Involved in various discussions and gathered project specific requirements and prepared functional specs.

Environment

Python, JavaScript, HTML, CSS, Bootstrap

CERTIFICATES

Web Development Bootcamp
Udemy course

Full Stack Developer Course
HTML, CSS, JavaScript, Java,

STRENGTHS

Positive mental attitude with a drive to succeed.

Proactive, with ability to learn and excel.

Believe in team work and hardworking.
